

Budget App Bugs & Changes Wanted

- Month Selection is chosen on July but it's not automatically showing it, it's kind of hidden, it's showing more of the previous months

- On Limit Tab, checking which shifts I can work. But why is the shift from 2PM to 5PM only 2 hours of work? It's 3, because I can't take a break if it's less than 3 hours of work.

- Ask Claude for advice button lets me click it but nothing ever shows up - just an empty box of text, because there is nowhere to put my API from Claude in.

- There is no place to put frequency on the 'Can I Work these shifts' card on Limit Tab. So it's calculating how much I would earn in a week but it should be a month. The normal frequency should be every week anyway.

Can I work these shifts?

Add the shifts you're thinking of working this month — I'll tell you if you can.

+ Add a shift

Each shift's break is taken off automatically (defaults to 60 min).

This month	15.5h · ¥21,700
Your monthly target	67h · ¥94,601
If every month were like this	≈ ¥665,495/yr

✓

Yes — go for it. ¥72,901 under your monthly pace.

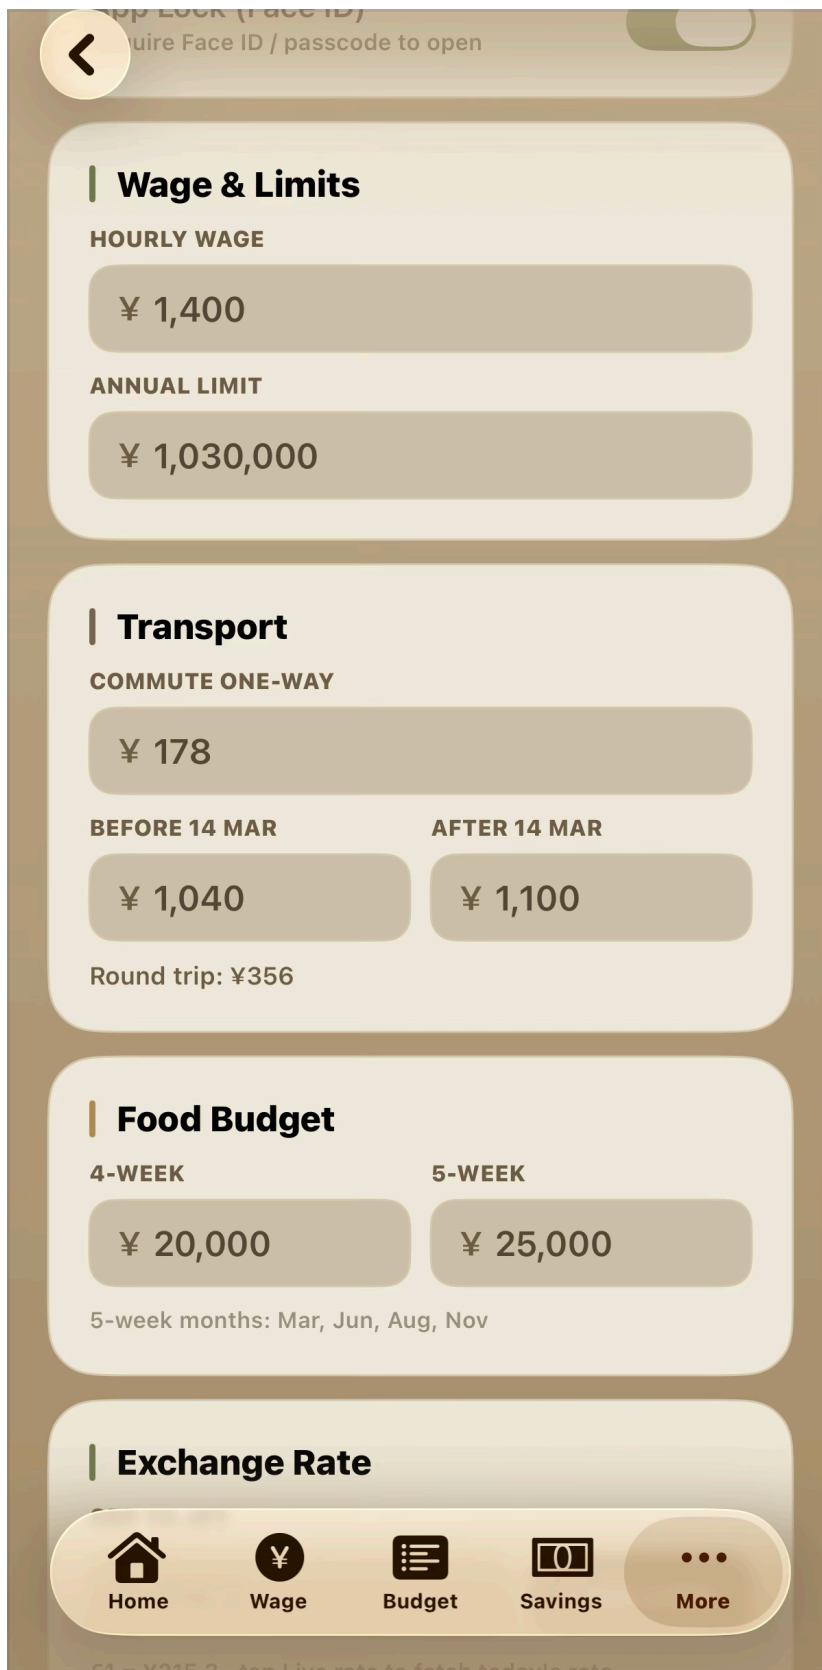

Ask Claude for advice

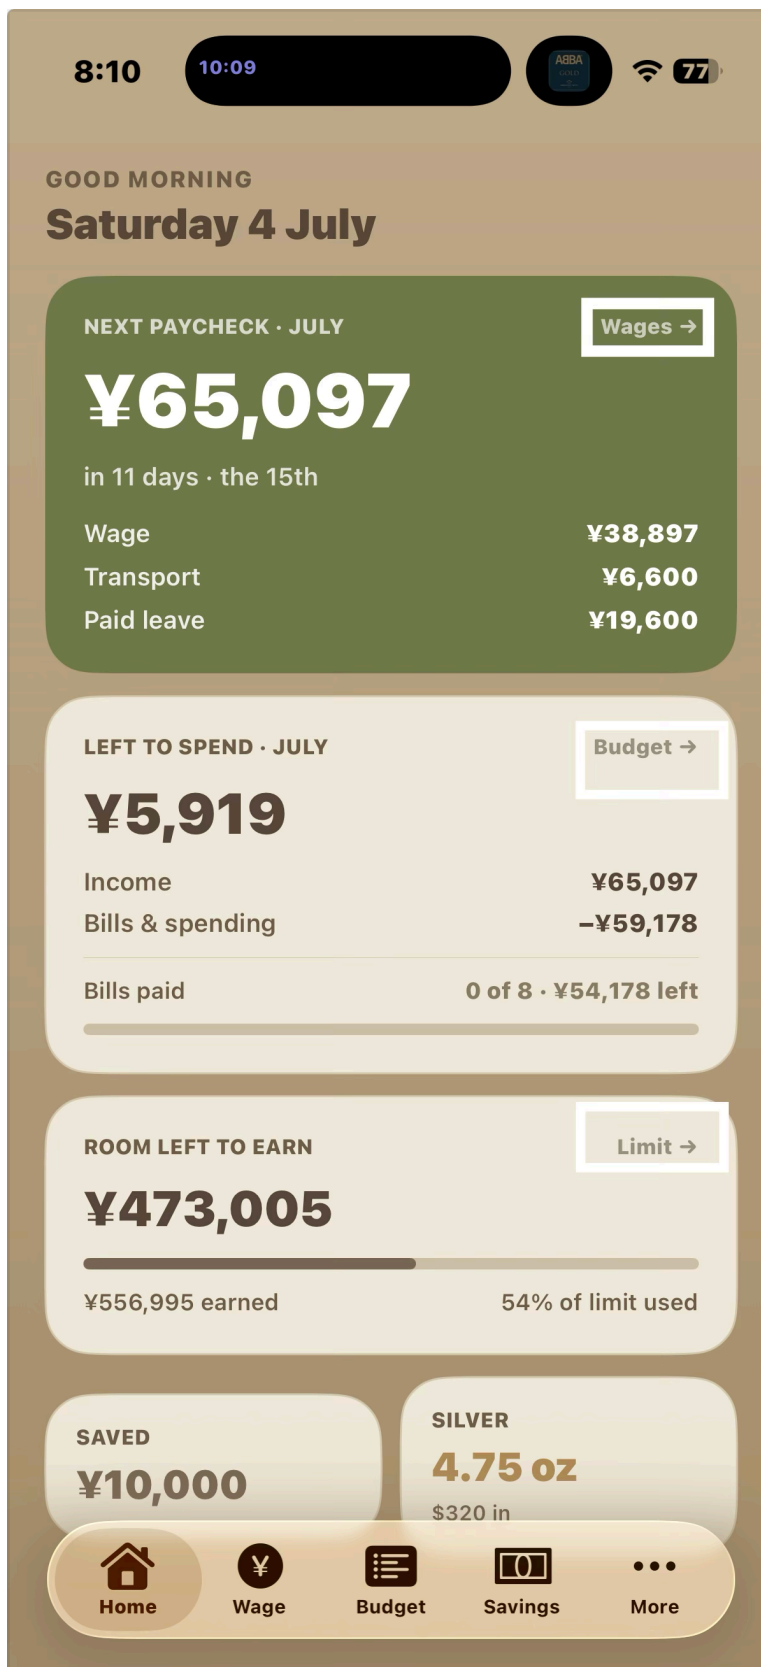

- I don't understand what this bar is trying to explain - what number does it have to be for the bar to be full

- On settings page, hide the before 14th March transport amount - that transport amount is what I told my work it costs me to get to work and go back home every working day but I don't need to know what it was before March anymore, just make sure it's still in the code for the months before March 14th 2026

- Add a feature to rearrange the cards on the Budget Tab
 - Clicking on these buttons are not bringing me to the pages it's saying it should be taking me to

- I'm not receiving any notifications from Budget app. It's a native IOS and MacOS app. But I'm not receiving any notifications at all. Additionally, tell me all the notifications that are supposed to get sent
 - After all of this, complete a bug check of the app
